

Assignment

WEEK -3, DAY-2 – JIRA Interaction

Classroom Task

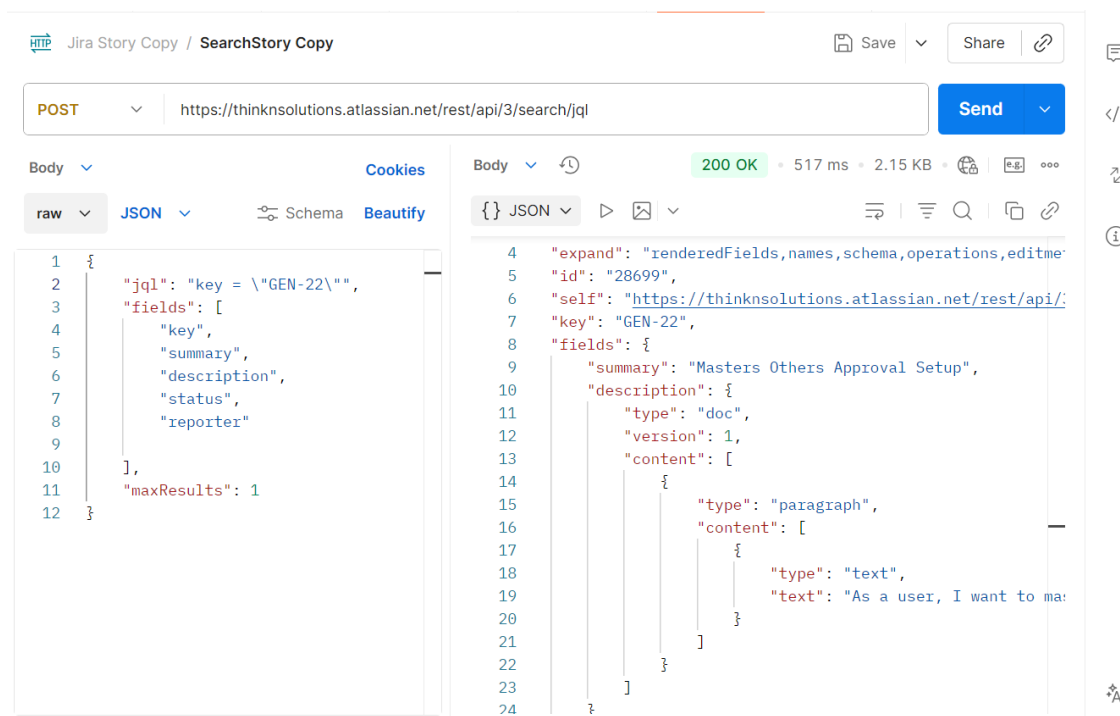

Test Case Generator: -

The screenshot shows a web browser at localhost:5173 displaying a page titled "Generated Test Cases". Below the title, it states "30 test case(s) generated • Model: llama-3.3-70b-versatile • Input tokens: 544 • Output tokens: 2226 • Cost: \$0.002080 (est.)". A table lists four test cases with columns for Test Case ID, Title, Category, and Expected Result.

Test Case ID	Title	Category	Expected Result
TC-001	Auto-Refresh Queue List	Positive	Queue list updates automatically to reflect the new patient status
TC-002	Apply Emergency Filter	Positive	Only patients with critical priority are visible
TC-003	Auto-Refresh with Scroll Position	Positive	Queue list updates automatically and retains scroll position
TC-	Auto-Refresh with Active Filters	Positive	Queue list updates automatically and retains active

JIRA Implementation

The screenshot shows a REST client interface with a POST request to `https://thinknsolutions.atlassian.net/rest/api/3/search/jql`. The request body is a JSON object with a JQL query. The response is a 200 OK status with a JSON body containing search results.

Request:

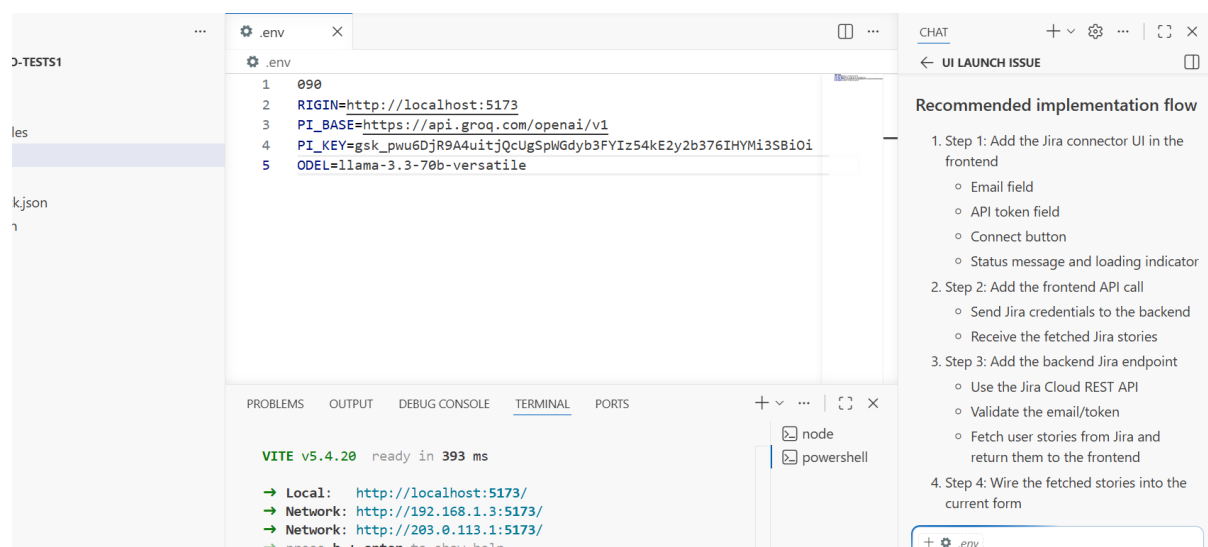

```
{
  "jql": "key = \\\"GEN-22\\\"",
  "fields": [
    "key",
    "summary",
    "description",
    "status",
    "reporter"
  ],
  "maxResults": 1
}
```

Response:

```
{
  "expand": "renderedFields,names,schema,operations,editme",
  "id": "28699",
  "self": "https://thinknsolutions.atlassian.net/rest/api/3/search/jql",
  "key": "GEN-22",
  "fields": {
    "summary": "Masters Others Approval Setup",
    "description": {
      "type": "doc",
      "version": 1,
      "content": [
        {
          "type": "paragraph",
          "content": [
            {
              "type": "text",
              "text": "As a user, I want to ma"
            }
          ]
        }
      ]
    }
  }
}
```

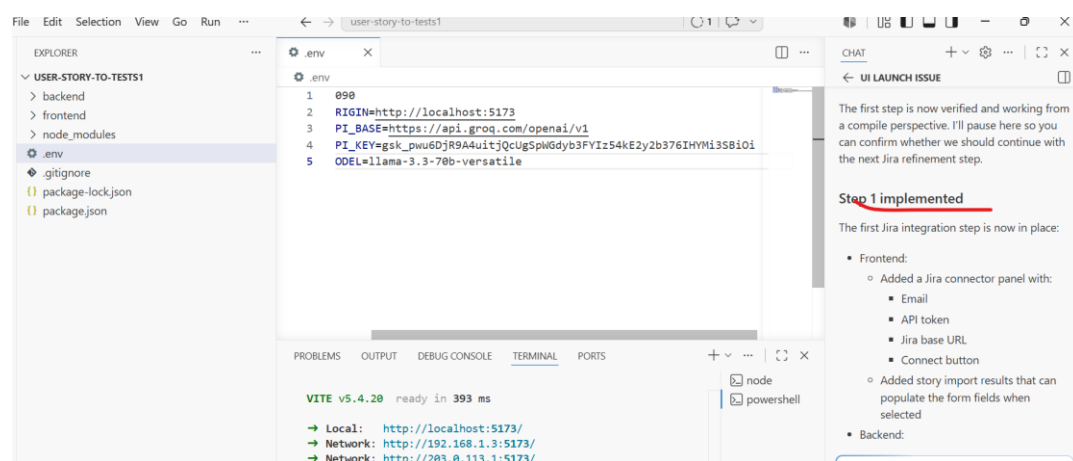

JIRA Connector – Home assignment

Using Copilot (ask) Prompt— Analyse the code and show the impacted and new files for the below implementation Connect to Jira and fetch the user stories implement for both Front end & Back end For the below implementation Go step by step and proceed on my approval with next step Create a connector for Jira in the UI with Email,API token and Connect button Also add the Jira end point to the implementation

Switching to Agent mode now Prompt:

Implement both front end and back end, go step by step on my approval proceed with next steps always ask for my approval
